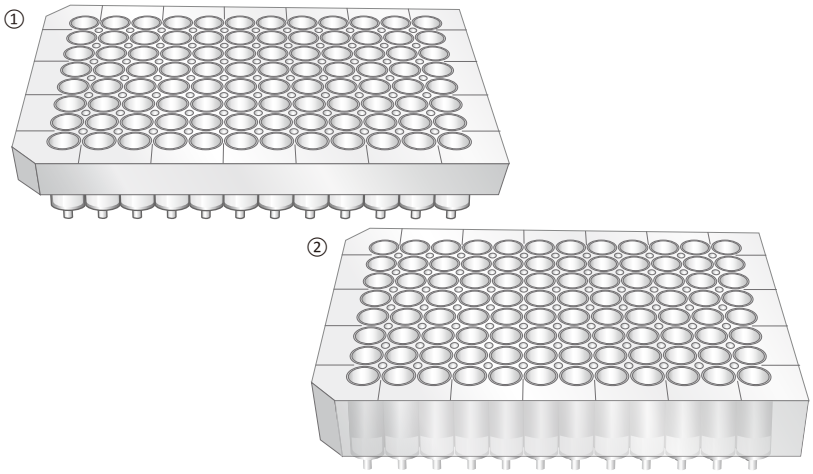
Quality Control of InertSep Products

The InertSep series is an original GL Sciences brand produced in our own factory through development, manufacturing, quality control and inspection. Our Fukushima Manufacturing factory has obtained the International Organization for Standardization ISO-9001 certification. All solid-phase extraction products are manufactured under strict quality control and widely used in the analysis of food and water samples. All products are inspected and only those which pass our stringent criteria are shipped to customers.
On request, we can provide a customization service and custom-made multi-sorbent beds in a cartridge.

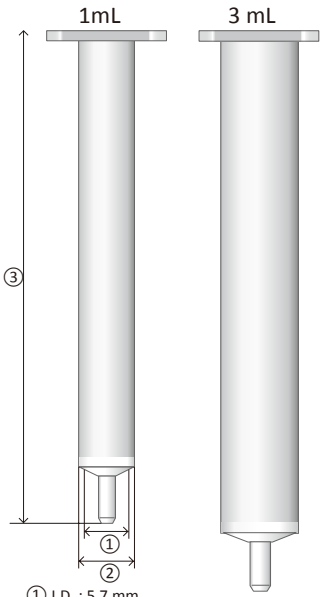
InertSep Format Guide

96-well Plates Type

Cartridge volume : ① 1.2 mL ② 800 µL
Cartridge material : PP housing and PE frit



※InertSep HLB(FF),MAX(FF),MCX(FF),WAX(FF) and WCX(FF)

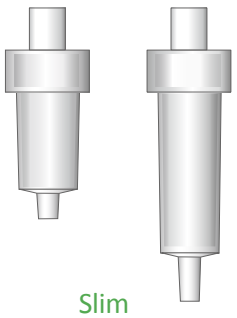


① I.D. : 5.7 mm
② O.D. : 7.7 mm
③Length : 66 mm

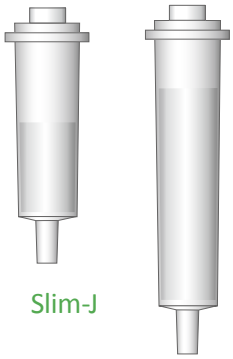
I.D. : 8.9 mm
O.D. : 10.9 mm
Length : 75 mm

Luer Device Type

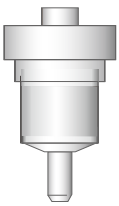
Demensions : Slim: 8.8 ϕ, O.D. length 32 mm, 21 mm
Slim-J : 8.8 ϕ, O.D. length 51 mm, 31 mm
mini: 12.7ϕ, O.D. length 12 mm
Cartidge material: PP housing and PE frit



Slim



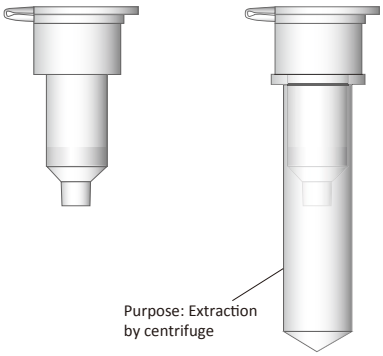
Slim-J



mini

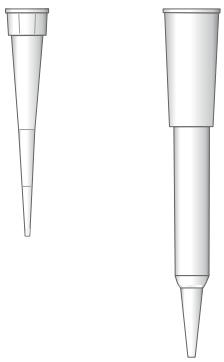
Spin Column Type

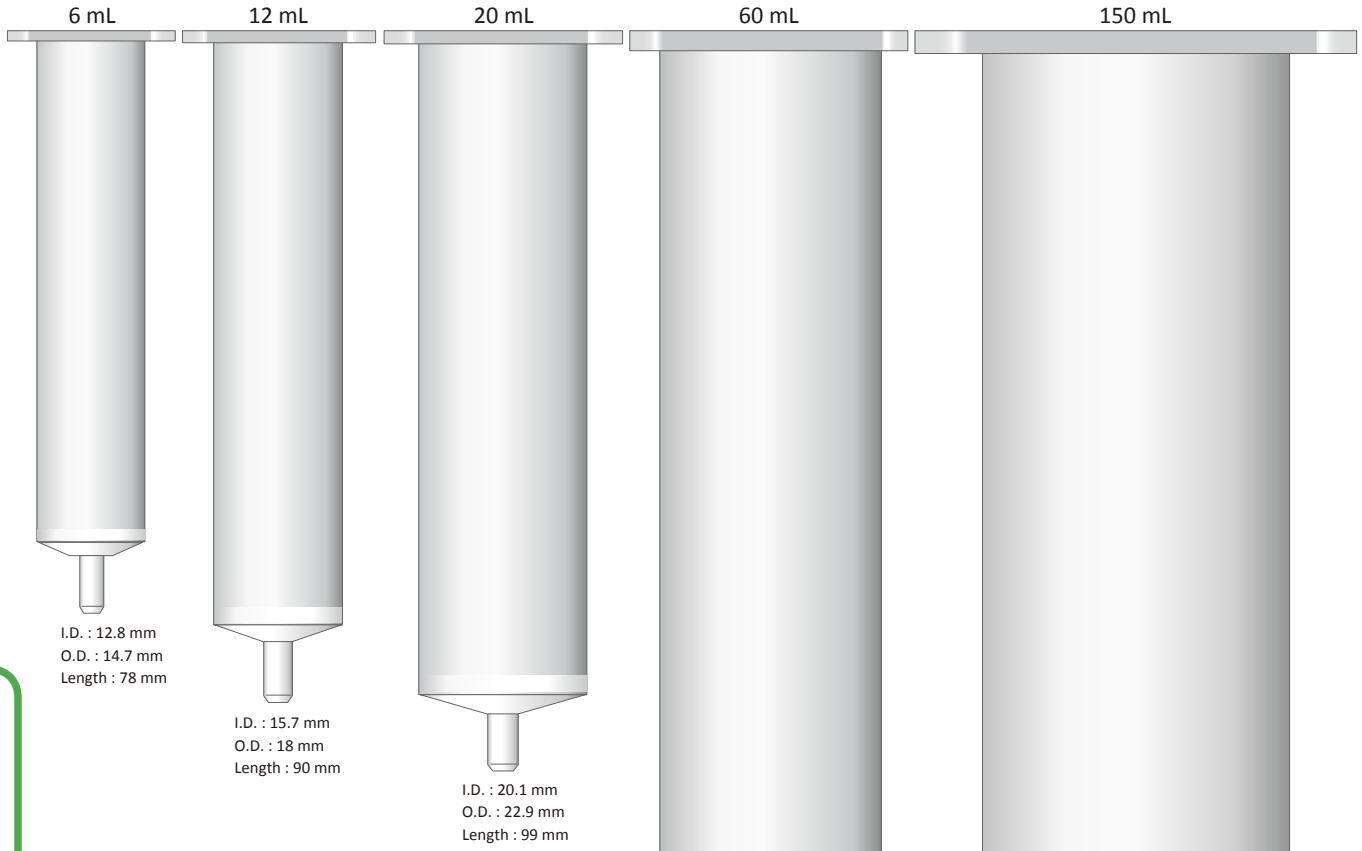
Cartridge volume: 1 mL
Cartridge material: PP housing



Tip Type

Cartridge volume: 10 µL, 200 µL
Cartridge material: PP housing



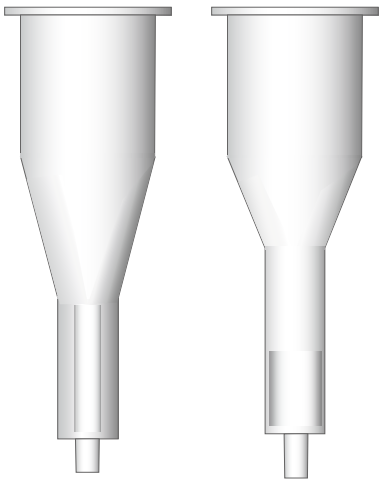


Syringe-Barrel Cartridges (Actual size)

Cartridge volume : 1, 3, 6, 12, 20, 60, 150 mL
Cartridge material : PP housing and PE frit

Large-size Cartridge (LSC)

Cartridge volume : 10 mL
Cartridge material : PP housing and PE frit

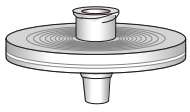


O.D. 6 mm for packed part of small SPE Bulk

O.D. 9 mm for packed part of SPE Bulk

EZ Cartridge

Dimensions : 25 mm
Cartridge material : PP housing

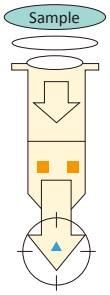


Objective of Solid Phase Extraction (SPE)

Separation and Purification of Target Analytes

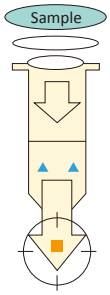
The principle of SPE is divided into the following two methods.

①Retaining the target analyte



Mainly used to concentrate target analytes in aqueous sample matrix.

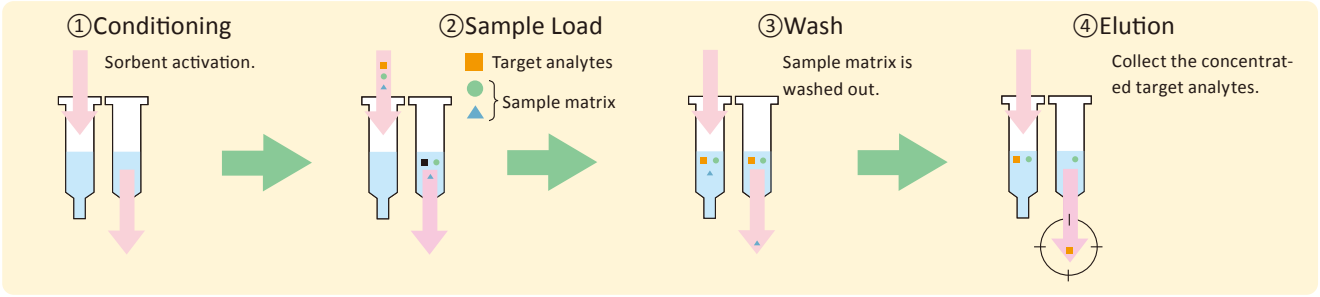
②Retaining the sample matrix and letting the target analytes pass through



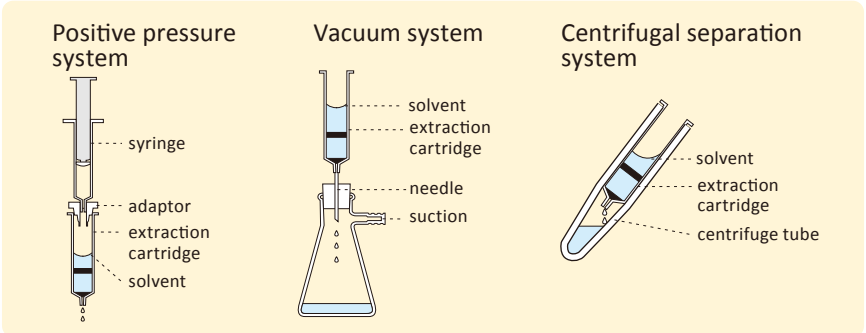
Used in simplification of complex sample matrix such as pesticide residues in crops and organic compounds in soil.

■ Target analyte
▲ Sample matrix

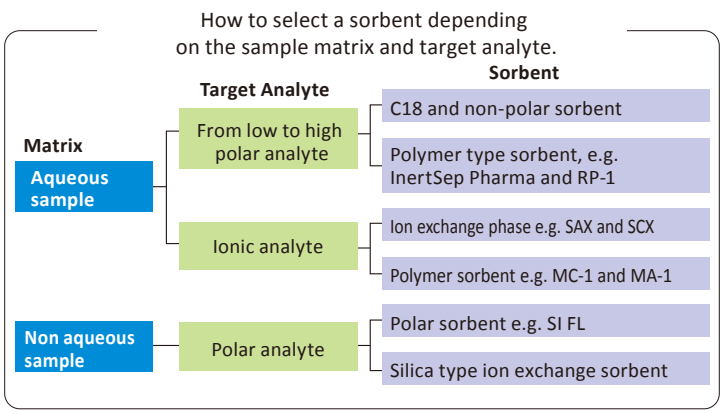
- General Four Steps



- General Methods for Processing Sample



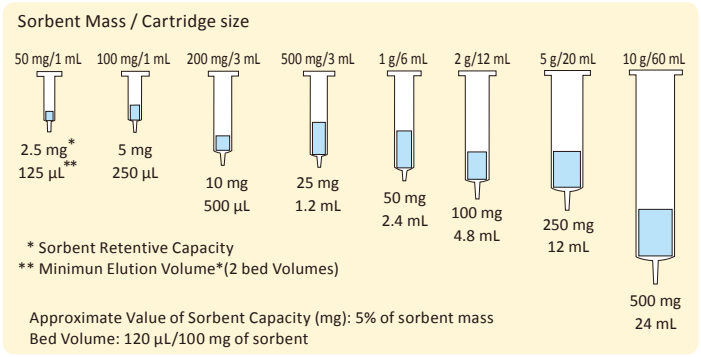
How to Select a Sorbent



One of the most important elements to achieve successful of solid phase extraction is the selection of a sorbent suitable for both the sample matrix and the target analyte.

The sorbent should be carefully selected by taking into account the chemical and physical properties of both the target analyte and the sample matrix. In addition, it is important to develop conditions that are optimal for retaining the target analyte, while removing the sample matrix, then selecting an elution solvent for maximum recovery of the target analyte.

Retentive Capacity of a Sorbent Compared to Sorbent Mass



※Bed volume is the quantity of the solvent necessary to replace the air trapped in the solid phase. Void volume is equivalent to the bed volume

Recommendation for Selecting an Ion Exchange Sorbent

Target Analytes	InertSep		pKa*	Structure	Target Ion	
					Weak Ion	Strong Ion
Acidic	Anion Exchange	MA-1 4Class Amine	–	$-CH_2-N^+(R)_3$	✓	×
		MA-2 2Class Amine	11.0	$-CH_2-N(R)_2$	✓	×
		NH2 Aminopropyl	9.8	$-CH_2CH_2CH_2NH_2$	×	✓
		PSA 1Class, 2Class Amine	10.1,10.9	$-CH_2CH_2CH_2NHCH_2CH_2NH_2$	×	✓
		SAX Tri-Methylaminopropyl	–	$-CH_2CH_2CH_2N^+(CH_3)_3$	✓	×
		SAX-2	–	$-CH_2CH_2CH_2N^+(CH_3)_3$	✓	×
Basic	Cation Exchange	MC-1 Sulfonic Acid	1.0	$-CH_2-SO_3^-$	✓	×
		MC-2 Carboxylic Acid	4.5	$-CH_2-COO^-$	✓	×
		CBA Ethyl Carboxylic Acid	4.8	$-CH_2CH_2COO^-$	×	✓
		PRS Propyl Sulfonic Acid	1.0	$-CH_2CH_2CH_2SO_3^-$	✓	×
		SCX Benzene Sulfonic Acid	1.0	$-CH_2CH_2C_6H_4SO_3^-$	✓	×
		SCX-2	–	$-CH_2CH_2C_6H_4SO_3^-$	✓	×

* pKa reference value for each functional group.

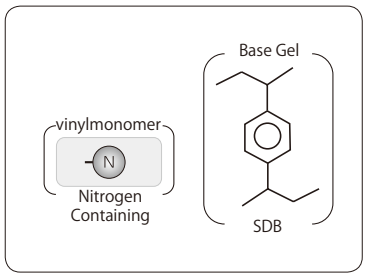
InertSep HLB



Average Particle Size : 30 µm
Surface Area : 720 m²/g
Pore Volume : 1.3 mL/g
Pore Size : 7 nm
pH Range : 1-14

InertSep HLB is a reversed phase sorbent made of styrene-divinylbenzene (SDB) and a nitrogen-containing vinyl monomer.

Syringe-Barrel Cartridges

Description	Bed Weight/Volume	Qty.	Cat.No.
InertSep HLB	10 mg/1 mL	100 pcs	5010-27520

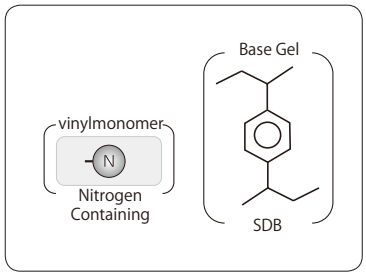
InertSep HLB FF



Average Particle Size : 60 µm
Surface Area : 720 m²/g
Pore Volume : 1.3 mL/g
Pore Size : 7 nm
pH Range : 1-14

InertSep HLB FF is a high-flow version of InertSep HLB. Effective for rapid processing of highly viscous samples.

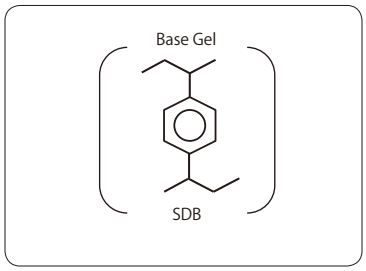
InertSep PLS-2



Average Particle Size : 70 µm
Surface Area : 700 m²/g
Pore Volume : 1.1 mL/g
Pore Size : 7 nm
pH Range : 1-14

InertSep PLS-2 is a SDB polymer-based reversed phase sorbent. Compared to silica based C18 sorbents, InertSep PLS-2 has a quite higher retention capacity and better stability in a wide pH range.

Syringe-Barrel Cartridges

Description	Bed Weight/Volume	Qty.(pk unit)	Cat.No.

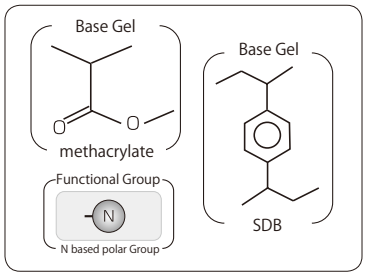
InertSep PLS-2	10 g	5010-69100
	100 g	5010-69101

InertSep PLS-3



Average Particle Size : 60 µm
Surface Area : 600 m²/g
Pore Volume : 1.1 mL/g
Pore Size : 7 nm
pH Range : 1-14

InertSep PLS-3 is a copolymer-based sorbent comprised of nitrogen-containing methacrylate and SDB, exhibiting adequate retention for a variety of compounds from highly polar to hydrophobic compounds.

Syringe-Barrel Cartridges

Description	Bed Weight/Volume	Qty.(pk unit)	Cat.No.

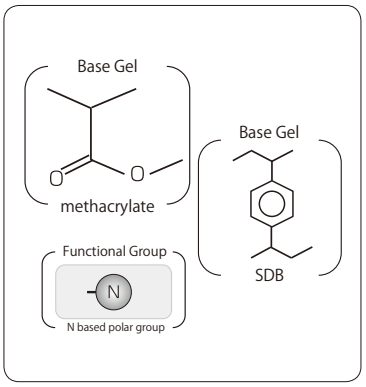
EZ Cartridge RP-1	50 pcs	5010-30250

InertSep Pharma



Average Particle Size : 30 µm
Surface Area : 600 m²/g
Pore Volume : 1.1 mL/g
Pore Size : 7 nm
pH Range : 1-14

InertSep Pharma is a copolymer-based sorbent comprised of nitrogen-containing methacrylate and SDB. This sorbent was developed for simultaneous screening of drug metabolites in biological samples.

Syringe-Barrel Cartridges

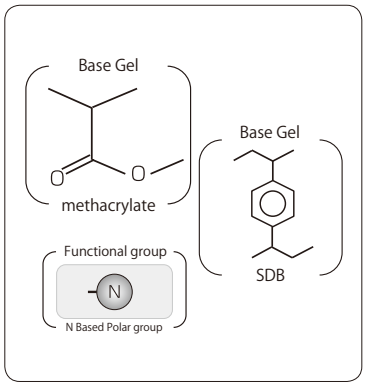
InertSep Pharma FF



Average Particle Size : 60 µm
Surface Area : 600 m²/g
Pore Volume : 1.1 mL/g
Pore Size : 7 nm
pH Range : 1-14

InertSep Pharma FF is a modified version of InertSep Pharma for high flow lates. This sorbent is suitable for viscous biological samples and large volume samples.

Syringe-Barrel Cartridges

Description	Bed Weight/Volume	Qty.	Cat.No.
InertSep Pharma FF	60 mg/3 mL	100 pcs	5010-27111
	200 mg/6 mL	30 pcs	5010-27113

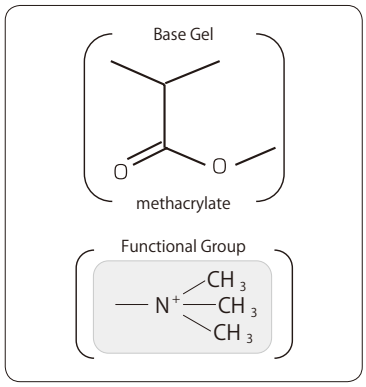
InertSep MA-1



Average Particle Size	: 70 µm
Surface Area	: 250 m²/g
Pore Volume	: 0.7 mL/g
Pore Size	: 13 nm
Ion exchange capacity	: 0.5 meq/g
pH Range	: 1-14
Remark	: Cl^- ion pair

InertSep MA-1 is a methacrylate polymer-based sorbent modified with strong anion exchange functional groups. This sorbent is highly hydrophilic, and retained anions can be easily eluted.

Syringe-Barrel Cartridges

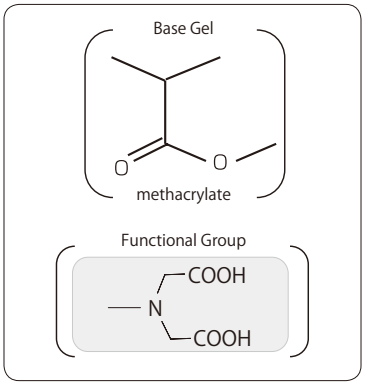
InertSep ME-1



Average Particle Size	: 70 µm
Surface Area	: 80 m²/g
Pore Volume	: 0.5 mL/g
Pore Size	: 21 nm
Ion exchange capacity	: Cu^{2+} 0.3 mmol/g
pH Range	: 1-14
Remark	: H^+ ion pair

InertSep ME-1 is a methacrylate copolymer based solid sorbent modified with iminodiacetic acid, weak cation exchange functional groups. It is highly hydrophilic and does not retain monovalent Na ion or K ion, but it does retain metal divalent or more cations. This offers selective concentration of such metal ions and is suitable for custom made of Ni affinity plates for protein purification.

Pore Size : 6 nm
pH Range : 2-8

InertSep C18 is a silica-based sorbent modified with C18 for non-polar interactions. With our high-level end-capping technology, cation exchange by interaction with the residual silanol groups is suppressed, which reduces adsorption of basic compounds. This sorbent is suitable for removing lipid for simultaneous analysis of pesticide residues in agricultural products.

InertSep C8

$Si\text{-}(CH_2)_7CH_3$

Average Particle Size : 60 µm
Carbon Load : 12 %
End-Capping : Middle
Surface Area : 450 m^2/g
Pore Volume : 0.7 mL/g
Pore Size : 6 nm
pH Range : 2-8

InertSep C8 is a silica-based sorbent modified with C8 (octyl) function groups that offers a weaker non-polar interaction than C18. InertSep C8 is used for isolates that are strongly retained too much on C18. With high-level end-capping, cationic interaction with the silanol groups on silica substrate is virtually eliminated and adsorption of basic compounds is reduced.

$Si\text{-}C_2H_5$

Average Particle Size : 60 µm
Carbon Load : 5.5 %
End-Capping : Middle
Surface Area : 450 m^2/g
Pore Volume : 0.7 mL/g
Pore Size : 6 nm
pH Range : 2-8

InertSep C2 is a silica-based sorbent modified with C2 (ethyl) functional groups being utilized for a weaker non-polar interaction than C8. InertSep C2 is used for isolates that are strongly retained too much on C8. As end-capping is accomplished on this sorbent, cation exchange interaction with none bonded silanol groups is virtually eliminated resulting in reduced adsorption of basic compounds.

Pore Size : 6 nm
pH Range : 2-8

InertSep PH is a silica-based sorbent modified with phenyl functional groups having a similar non-polar interaction to C8. Phenyl functional group has π-π bond interaction which allows an isolate molecule bearing benzene ring, such as aromatic compounds to selectively interact with phenyl functional group on the sorbent.

InertSep CN

$Si-(CH_2)_3-CN$

Average Particle Size : 45 µm
Carbon Load : 7.5 %
Surface Area : 450 m^2/g
Pore Volume : 0.7 mL/g
Pore Size : 6 nm
pH Range : 2-8

InertSep CN is a silica-based sorbent modified with cyanopropyl functional groups. Having both non-polar and polar interactions, InertSep CN is ideal for applications in which extremely non-polar isolates would irreversibly retain on more non-polar sorbents such as C18 or C8 and very polar isolates might be retained irreversibly on the most polar sorbents such as SI or 2OH.

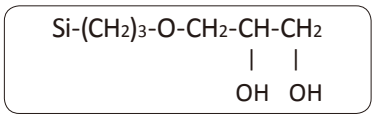
InertSep 2OH



Average Particle Size : 60 µm
Carbon Load : 10 %
Surface Area : 450 m²/g
Pore Volume : 0.7 mL/g
Pore Size : 6 nm
pH Range : 2-8

InertSep 2OH is a silica-based sorbent modified with diol functional groups. Being a fairly polar sorbent, InertSep 2OH is typically used for polar extractions from low-polar or non-polar solvents.

InertSep SI

Si-OH

Average Particle Size : 60 µm
Surface Area : 450 m²/g
Pore Volume : 0.7 mL/g
Pore Size : 6 nm
pH Range : 2-8

InertSep SI is a bare silica, which has strong polar interaction. It offers selective separation for similar compounds in structure using low-polar solvents. InertSep SI is regarded as the most polar sorbent available. Care should be taken with humidity and polar solvents, when using this material.

Si-OH

Average Particle Size : 120 µm
Surface Area : 450 m^2/g
Pore Volume : 0.7 mL/g
Pore Size : 6 nm
pH Range : 2-8

InertSep SI FF is an arranged version of InertSep SI for applications that need high flow late. This sorbent is also good at viscous sample and large volume sample to expedite the procedure.

$MgO \cdot SiO_2$

Average Particle Size : 50-200 µm
Surface Area : 230 m^2/g
Pore Volume : 0.5 mL/g
Pore Size : 9 nm

InertSep FL is packed with synthetic magnesium silicate. This sorbent strongly adsorbs polar compounds from none polar matrices and is typically used for sample cleanup of organic extracts.

InertSep CBA

$Si\text{-}(CH_2)_2\text{-}COO^-$

Average Particle Size : 45 µm
Carbon Load : 8.5 %
Surface Area : 450 m^2/g
Pore Volume : 0.7 mL/g
Pore Size : 6 nm
Ion exchange capacity : 1.2 meq/g
pH Range : 2-8
Remark : H^+ ion pair

InertSep CBA is a silica-based sorbent modified with carboxylethyl functional groups. The primary interactions of this sorbent are cation exchange and the secondary interactions are week-polar and non-polar. This sorbent is suitable for extraction of drugs with strongly cationic amine groups.

pH Range	: 2-8
Remark	: H^+ ion pair

InertSep SCX is a silica-based sorbent modified with propylbenzenesulfonyl groups. The primary interactions of this sorbent are both non-polar and strong cation exchange. Because the non-polar interactions on InertSep SCX is stronger than those on InertSep PRS, it is suitable for extractions which require both non-polar interactions and strong cation exchange.

InertSep NH2

$Si\text{-}(CH_2)_3\text{-}NH_2$

Average Particle Size : 60 µm
Carbon Load : 10 %
Surface Area : 450 m^2/g
Pore Volume : 0.7 mL/g
Pore Size : 6 nm
Ion exchange capacity : 0.9 meq/g
pH Range : 2-8

InertSep NH2 is a silica-based sorbent modified with an aminopropyl groups. Anion exchange and polar interaction are combined as the primary interactions. As the secondary interactions, it has weak non-polar interactions. Similar to InertSep 2OH and InertSep SI used in normal phase mode, InertSep NH2 can be used for the separation of structural isomers.

InertSep Slim-J AC (Active Carbon)

InertSep Slim-J AC

Base Gel : Active Carbon
Average Particle Size : 60/150 mesh
Surface Area : 800-1200 m^2/g

InertSep Slim-J AC cartridges are packed with active carbon particles uniformly size classified for liquid permeability. As ultra-pure active carbon is employed, it is clear of worry about contamination. Good retentivity of this sorbent even for highly polar compounds ensure high recovery and reproducibility. Lure device format supports automation of SPE procedure.

InertSep Slim-J AC	400 mg	50 pcs	5010-25500

InertSep GC (Carbograph,Graphite Carbon)

InertSep GC

Base Gel : Graphite Carbon
Average Particle Size : 120/400 mesh
Surface Area : 85 m^2/g
Pore Volume : 1 mL/g
Pore Size : 45 nm

InertSep GC cartridges are packed with graphite carbon in planar structure. They are generally used for removal of pigments from crop homogenates. In conjunction with other various normal phase sorbents and ion exchange sorbents, these cartridges are able to be used for a wide variety of applications as a cleanup sorbent.

InertSep GC/NH2, GC/PSA

6 mL Type

20 mL Type

These two layer cartridges are packed with graphite carbon for removing pigments and NH2 or PSA sorbent for sample cleanup of organic extracts. This consolidation of two layers achieves high sample cleanup performance which cannot be obtained only on one layer.

Two Layer Syringe-Barrel Type

Description	Bed Weight/Volume	Qty.(pk unit)	Cat.No.

	1 g/1 g/20 mL	20 pcs(10 pcs)	5010-68105

InertSep GC/PSA/SI, GC/SAX/PSA

InertSep GC/PSA/SI is more efficient for removing a wide variety of polar matrix compounds than GC/PSA. InertSep GC/SAX/PSA are able to be used for cleanup of processed food.

Three Layer Syringe-Barrel Type

Description	Bed Weight/Volume	Qty.(pk unit)	Cat.No.
InertSep GC/PSA/SI	500 mg/500 mg/500 mg/20 mL	20 pcs(10 pcs)	5010-68034
InertSep GC/SAX/PSA	500 mg/500 mg/500 mg/20 mL	20 pcs(10 pcs)	5010-68044

InertSep GC/SAX/PSA/SI

InertSep GC/SAX/PSA/SI is a four layer SPE cartridge. GC has ability for the isolation removal of pigments and SAX, PSA and SI offer superior cleanup when conducting multi-residue pesticide analysis.

Four Layer Syringe-Barrel Type

Description	Bed Weight/Volume	Qty.(pk unit)	Cat.No.
InertSep GC/SAX/PSA/SI	500 mg/500 mg/500 mg/500 mg /20 mL	20 pcs(10 pcs)	5010-68054

InertSep SAX/PSA/SI

InertSep SAX/PSA/Si is a three-layer SPE cartridge for cleanup. It is available for sample cleanup to make analysis of residual pesticides.

Three Layer Syringe-Barrel Type

InertSep SAX/PSA/SI	500 mg/500 mg/500 mg /20 mL	20 pcs(10 pcs)	5010-68114

InertSep C18/DRY

InertSep C18/DRY is a two-layer SPE cartridge and designed for sample preparation for residual pesticide analysis. C18 is to remove lipids and DRY is for dehydration.

Two Layer Syringe-Barrel Type

Description	Bed Weight/Volume	Qty.(pk unit)	Cat.No.
InertSep C18/DRY	1 g/3 g/12 mL	20 pcs(1 pc)	5010-68133

InertSep C18/SAX/PSA,AL-N/C18/SAX/PSA

Three- and four-layer-type solid phas extraction cartridges are used for rapid simultaneous analysis of pesticide residues. Since graphite carbon is not used, the purification process can be performed with only a small amount of acetonitrile solvent without toluene. For particularly pigmented samples, the four-layer-type AL-N/C18/SAX/PSA can be recommend.

Three and Four-Layer Syringe-Barrel Type

Description	Bed Weight/Volume	Qty.	Cat.No.
InertSep C18/SAX/PSA	200 mg/100 mg/100 mg/1 mL	100 pcs	5010-68110
InertSep AL-N/C18/SAX/PSA	100 mg/200 mg/100 mg/100 mg/1 mL	50 pcs	5010-68111

InertSep Slim-J DRY

Na_2SO_4

InertSep Slim-J DRY cartridge is packed with anhydrous Na_2SO_4 for dehydration.

Luer-Device Cartridges

Description	Bed Weight/Volume	Qty.(pk unit)	Cat.No.
InertSep Slim-J DRY	1.4 g	50 pcs(1 pc)	5010-65700
	2.8 g	50 pcs(1 pc)	5010-65701

InertSep PCB

InertSep PCB is a two-layer SPE cartridge packed with SCX and SI. It has been designed for the extraction of PCBs from complex matrix.

Syringe-Barrel Cartridges

Description	Bed Weight/Volume	Qty.(pk unit)	Cat.No.
InertSep PCB	1 g/3 mL	50 pcs(5 pcs)	5010-68121
	1 g/6 mL	30 pcs(1 pc)	5010-68120

InertSep Phospholipid Remover

InertSep Phospholipid has both excellent phospholipid removal ability and low adsorption, and can be used for serum and plasma samples, etc.

Description	Bed Weight/Volume	Qty	Cat.No.
InertSep Phospholipid Remover	50 mg/1 mL	100 pcs	5010-27810
	100 mg/3 mL	50 pcs	5010-27811

InertSep K-solute(Diatomaceous earth)

InertSep K-solute

InertSep K-solute is packed with diatomaceous earth and ideal for the sample to form an emulsion during liquid-liquid extraction procedures. Dedicated rack for InertSep makes the operation simple and effi cient further more.

Procedure 1 Apply a sample to InertSep K-solute

Procedure 2 Leave it to stand for 5 to 15 minutes

Procedure 3 Elute with an elution solvent

Reservoir dimensions

Volume of Used Reservoir	O.D.	Length
12 mL	18 mm	90 mm
20 mL	23 mm	99 mm
60 mL	30 mm	155 mm
150 mL	41 mm	172 mm

Syringe-Barrel Cartridges

Description	Reservoir Volume	Sample Volume	Qty.	Cat.No.
InertSep K-solute	12 mL	2 mL	100 pcs	5010-68125
	20 mL	5 mL	100 pcs	5010-68127
	60 mL	10 mL	25 pcs	5010-68208
			100 pcs	5010-68218

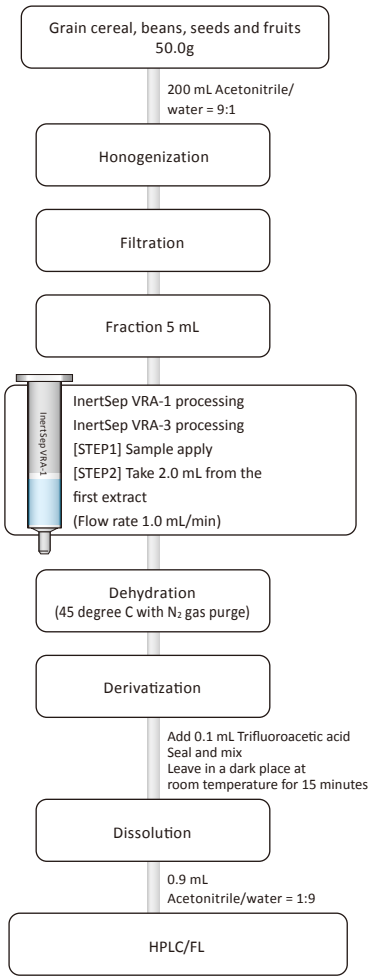
Reservoir with Adaptor for 1, 3, 6 mL	12 pcs	5010-60015
50 mL Reservoir with Adaptor for 12, 20 mL	12 pcs	5010-60016
200 mL Reservoir with Adaptor for 60 mL	12 pcs	5010-60017

InertSep VRA (Multifunctional Cleanup SPE Cartridge for Aflatoxins)



Total Aflatoxin Analysis

A number of mycotoxins are contained in natural food products. Among these, Aflatoxins produced by funguses such as Aspergillus flavus are carcinogenic to liver cells, and have attracted considerable attention in food safety.

InertSep VRA Series

InertSep VRA series are multifunctional solid phase extraction cartridges for cleanup samples in complex organic matrices.

Feature

These multifunctional cartridges have the advantages of both reversed phase and ion exchange silica-based sorbents.

Description	Details	Qty.	Cat.No.
InertSep VRA-1	Mix mode: Reversed and ion exchange phase (Column size : 6 mL)	30 pcs	5010-68140
InertSep VRA-2	Economy model of VRA-1 (Column size : 6 mL)	30 pcs	5010-68141
InertSep VRA-3	Strong reversed phase model (Column size : 6 mL)	30 pcs	5010-68142

InertSep VRA-RP (Mutifunctional Cleanup SPE Cartridge for pesticide residue analysis and biological samples)

InertSep VRA-PR

InertSep VRA-PR is a solid-phase mini-column for trace cleanup in biological samples and for cleanup of QuEchERS samples in pesticide residue analysis.

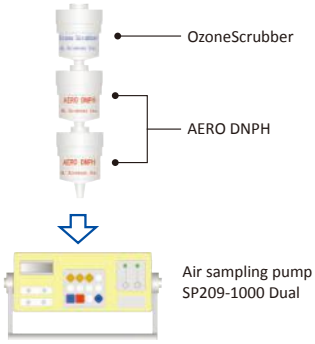
For removal of strong pigment components, columns stacked with "AL-N" are recommended.

Feature

・These multifunctional cartridges have the advantages of both reversed phase and ion exchange silica-based sorbents.

Description	Bed Weight/Volume	Qty.	Cat.No.
InertSep VRA-PR	400mg/1mL	100 pcs	5010-68153
InertSep VRA-PR	1600mg/6mL	30 pcs	5010-68154
InertSep AL-N/VRA-PR	100mg/50mg/1mL	100 pcs	5010-68150
InertSep AL-N/VRA-PR	400mg/1600mg/6mL	30 pcs	5010-68151
InertSep AL-N/VRA-PR	100mg/400mg/1mL	100 pcs	5010-68152

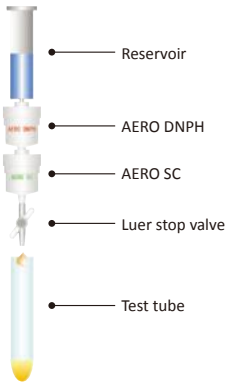
InertSep mini AERO series



Ex 1) How to use InertSep mini AERO

Note) Use the Ozonescrubber depending on the requirement

When used with a manifold



Ex 2) How to use InertSep mini AERO

InertSep mini AERO series are active samplers for the analysis of aldehydes and ketones in outdoor gas, car cabin and exhaust gas in compliance with: Offensive Odor Control Law, Clean Air Act, and EPA. There are four types: AERO DNPH, AERO DNPH-HR, AERO OzoneScrubber, and AERO SC, InertSep mini AERO series.

Features

InertSep mini AERO DNPH

This active sampler is packed with spherical silica coated with 2,4-Dinitrophenylhydrazine reagent for derivatization of aldehydes and ketones. The size of 120 µm spherical silica allows for high air permeability, resulting in high collection efficiency of the target compounds and low blank compared with irregular silica.

InertSep mini AERO DNPH-HR

This is newly developed and offers improved efficiency for acrolein collection, which is difficult to collect with the conventional DNPH cartridges.

InertSep mini AERO OzoneScrubber

Potassium iodide is used to remove ozone interference. It is known that the DNPH derivatives are decomposed by ozone, which affects the results. InertSep AREO OzoneScrubber is used in series with DNPH cartridge at its inlet side.

InertSep mini AERO SC

This cartridge is packed with polymeric packing material of strong cation exchange to remove unreacted DNPH.

Unreacted DNPH interferes with GC analysis, so is connected to the outlet side of DNPH cartridge.

Description	Bed Weight	Qty.	Cat.No.
InertSep mini AERO DNPH [●R/F]	300 mg	20 pcs	5010-23500
InertSep mini AERO DNPH-HR [●R/F]	300 mg	20 pcs	5010-23501

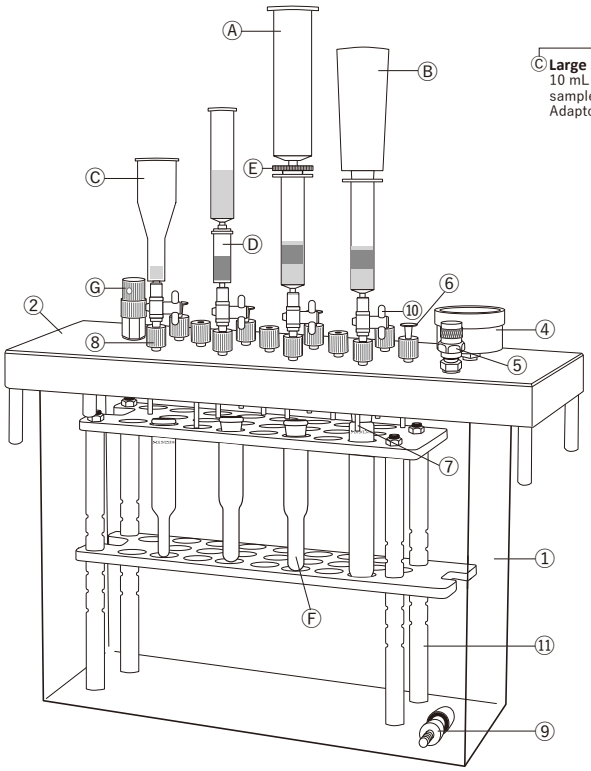
Introduction of InertSep Vacuum Manifold System

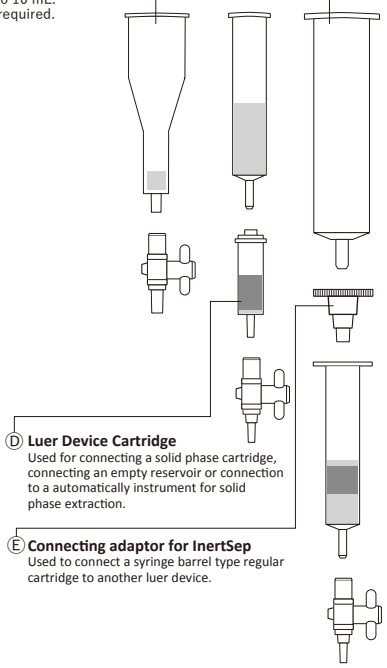
InertSep vacuum manifold is specially developed for performing efficient solid phase extraction. According to the application there are various kinds of useful kits and options.



Ⓒ Large Size Cartridge
10 mL reservoir used with samples up to 10 mL. Adaptor not required.

Ⓐ Empty Reservoir
1 mL to 150 mL reservoirs are available for large sample amount. Requires a connecting adaptor.

Ⓑ Reservoir with adaptor
Ideal for use in the pretreatment of food. Useful when using a cleanup volume of 20 mL approx.



Ⓓ Luer Device Cartridge
Used for connecting a solid phase cartridge, connecting an empty reservoir or connection to a automatically instrument for solid phase extraction.

Ⓔ Connecting adaptor for InertSep
Used to connect a syringe barrel type regular cartridge to another luer device.

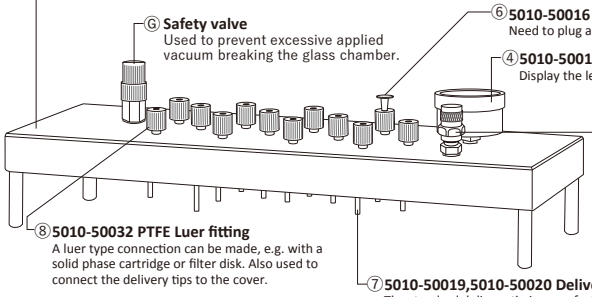
⑩ 5010-60010 Luer Stop Valve (PTFE)
Used to control or stop the flow rate during solid phase extraction.

② 5010-50238 Top Cover Assembly
Fit onto the glass chamber to perform solid phase extraction.

Ⓖ Safety valve
Used to prevent excessive applied vacuum breaking the glass chamber.

⑥ 5010-50016 Sealing plug
Need to plug any line not being used.

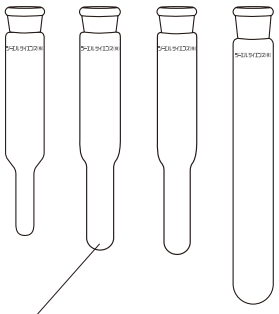
④ 5010-50014 Vacuum gauge
Display the level of vacuum in the glass chamber.



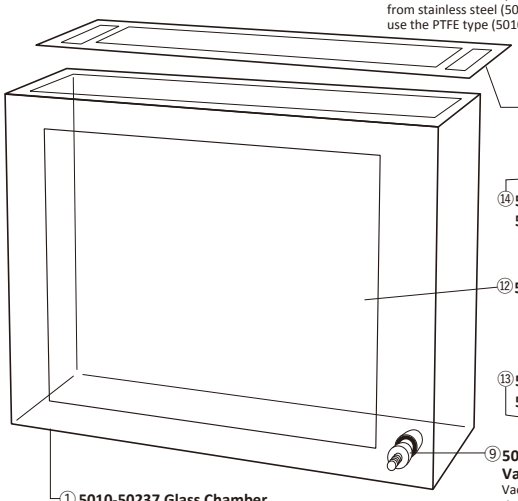
⑤ 5010-50015 Bleed valve
Used to adjust the amount of vacuum applied. Adjust while monitoring the pressure displayed on the vacuum gauge.

⑧ 5010-50032 PTFE Luer fitting
A luer type connection can be made, e.g. with a solid phase cartridge or filter disk. Also used to connect the delivery tips to the cover.

⑦ 5010-50019,5010-50020 Delivery Tips
The standard delivery tip is manufactured The standard delivery tip is manufactured from stainless steel (5010-50019). When correction resistance is required, use the PTFE type (5010-50020).

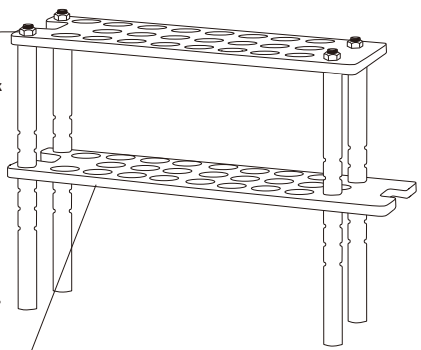


Ⓕ 5010-51010 etc, GL-SPE
Concentration tubes There are 11 different sizes. Select, depending on the volume of the extraction solvent and concentration volume.



③ 5010-50239 Gasket
Used to seal the cover assembly and the glass chamber to maintain vacuum.

⑭ 5010-50018 Stainless steel nut for rack
5010-50129 Hexagon nut M6x4 for rack



⑫ 5010-50041 Glass protection film

⑬ 5010-50017 O-ring
5010-50128 Resin clip for rack

⑨ 5010-50033 Vacuum tube connector assembly
Vacuum tube connector Used to connect the glass chamber to the vacuum pump.

① 5010-50237 Glass Chamber
For extraction using a diaphragm suction pump, it is resistant to pressure. Stainless bats (5010-50122) are also available.

⑪ 5010-50240 Bottom plate
There 5 type of racks: 12/16 mm test tube, 20 mL concentration tube, 30 mL COncentration tube, TS 29/38 eggplant shaped flask, TS 29/38 Florence flask 50/100 mL.

InertSep Vacuum Manifold Kit

5010-50230

5010-50234

5010-50235

5010-50233

For the efficient SPE analysis using InertSep vacuum manifold system, necessary accessories are provided as a kit for general or environmental analysis which needed many samples such as river water. Some kits are suitable for your analytical purposes.

Description	Specification	Qty.	Cat.No.

Drain Plate	PP and POM: Legs (for Inorganic Compounds Analysis)	1 pc	5010-50127

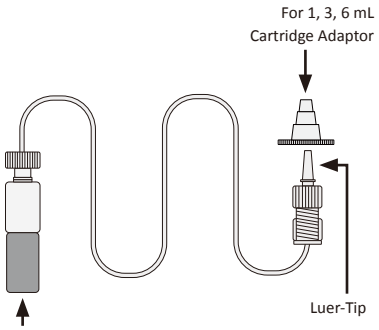
Useful Items for Vacuum Manifold

The sealing plug has the same luer-tip shape as the tip of the solid phase column.
It can plug ports that are not in use, such as suction manifolds.

Description	Specification	Qty.	Cat.No.
Sealing Plug	PP	12 pcs	5010-50016

Note: Twelve plugs are included with the InertoSep Suction Manifold Kit and system.

LS Tubing



5010-50213

A tube with a 40-µm pore-size filter and lure tip type adapter.
It prevents debris and dirt from flowing into the solid phase column when a large-volume of sample water is passed through.
(If the SS component is particularly high, prefiltration is recommended before use, if necessary.)
The length of the tube is ~1 m.
LS Tubing 1, 6, and 12 come with cartridge adapters (for 1, 3, and 6 mL).

Description	Specification	Qty.	Cat.No.
LS Tubing 0	without Cartridge Connection Adapter	1 pc	5010-50214

Racks

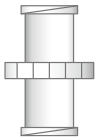
5010-50034

(Concentration tube not included)

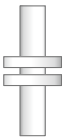
Racks are available to match the shape of the eluate receiver (This is for both the InertSEP suction manifold and the GL-SPE suction manifold).

Description	Specification	Diameter	Qty.	Cat.No.
Rack (PE)	12 mm/16 mm Test Tube (for 12 Samples)	12.5 mm/17 mm	1 pc	5010-50240
	20 mL Concentration Tube with Funnel (for 12 Samples)	ϕ23 (For Funnel ϕ13m)	1 set	5010-50241
	30 mL Test Tube with Funnel (for 12 Samples)		1 set	5010-50242
	TS29/38 50 mL 4 pcs or 100 mL 2 pcs Eggplant Flask	32 mm (30 mm)	1 pc	5010-50249
	For 50 mL DidiTUBEs (for Inorganic Compounds Analysis,8 Samples)	31 mm	1 pc	5010-50246
	7 mL Concentration Tube, 16 mm Test Tube (for 20 Samples)	17 mm	1 pc	5010-50256
	20/30 mL Concentration Tube (for 20 Samples)	23 mm	1 pc	5010-50253

Adapters for Backflush



5010-52013



5010-52012

5010-52011 example

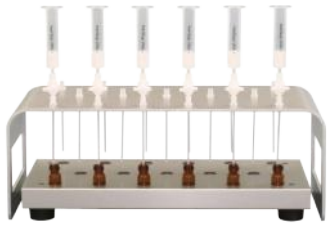
The back-flush adapter is used when eluting solid phase columns from the opposite direction of the flow direction.

Description	Specification	Qty.	Cat.No.
Male Luer Union for Backflush	Luer Tip Male on both Sides (PP)	10 pcs	5010-52012
Female Luer Union for Backflush	Luer Tip Female on both Sides (PP)	10 pcs	5010-52013
Backflush Adaptor for SPE Cartridge	Luer Tip Female on both Sides (PTFE)	5 pcs	5010-52011

GL-SPE Gravity Flow Manifold

5010-50430

5010-50440



5010-50430 + 5010-50432
Combination Exsample

The GL-SPE natural drop manifold is optimized for solid phase extraction using the natural drop method. Twenty-four delivery tips are included.

- Simple design
- Optimal performance for Mycotoxins sample preparation
- Gravity flow is improved with the delivery tips
- Luer stop valve offers the adjustment of flow rate
- Optional extension panels for 4 mL Vials, GL-SPE concentration tubes and eggplant flasks are available

Description	Specification	Qty.	Cat.No.
GL-SPE Gravity Flow Manifold	For General Analysis (Aluminum)	1 set	5010-50430
	For Inorganic Compounds Analysis (PVC)	1 set	5010-50440

Accessories for Gravity Flow Manifold

Description	Specification	Qty.	Cat.No.

For InertSep mini AERO DNPH

GL-SPE Manifold 20 for InertSep mini AERO DNPH

The InertSep Elution Manifold 20 is an InertSep mini AERO DNPH elution-only manifold. A flow-controlled (approximately 1 mL/min) spontaneous drop enables the efficient elution of up to 20 samples in DNPH cartridges after aldehyde collection.

No pumping equipment is required for elution.
It is capable of natural drop treatment at a flow rate of approx. 1 mL/min*.
It can reduce manual elution labor.

*: To perform elution by spontaneous drop, a 5 mL DNPH elution syringe is separately required. It is also extracted in the range of 0.6–1.2 mL/min when acetonitrile solvent is used (Flow rate cannot be changed).

Description	Specification	Qty.	Cat.No.
InertSep Manifold 20	For InertSep mini AERO DNPH (20 Samples)	1 set	5010-50236

Accessaries for InertSep Manifold 20

7 mL Rack for Concentration Tubes and Test Tubes	For 20 Samples	1 pc	5010-50256

Note: Gaskets cannot be used in the common process.

Option for InertSep Manifold 20

Description	Specification	Qty.	Cat.No.
Syringe for DNPH Elution	5 mL Glass(without needle)	6 pcs	3008-41151

GL-SPE mini Vacuum Manifold

GL-SPE mini Vacuum Manifold

GL-SPE mini vacuum manifold kit is space-saving, and kit 12C for cartridges and kit 96W for 96-well plates are available. Kit 12C can be used with SPE cartridge of up to 6 mL. As its option, vials can be placed.

Features

- Two types for cartridges or 96-well plates
- Space-saving
- Concentration tubes, 7 mL test tubes and tubes with 16 mm O.D. x 100 mm length are placeable as conection tubes.

Description	Format	Qty.	Cat.No.
GL-SPE Mini Vacuum Manifold Kit 12C (12 place positions for SPE cartridges)	Cartridge	1 pc	5010-50150
GL-SPE Mini Vacuum Manifold Kit 96W	96-well plate	1 pc	5010-50155
Vacuum Controller	Common	1 pc	5010-33071

Note: GL-SPE mini manifold kit 12C and 96W don't include the vacuum controller.

Accessories for GL-SPE Mini Manifold

Description	Qty.	Cat.No.
GL-SPE Mini Vacuum Manifold Chamber for 12C	1 pc	5010-50160
GL-SPE Mini Vacuum Manifold Top Plate for 12C *1	1 pc	5010-50161
GL-SPE Mini Vacuum Manifold Concentration Rack for 12C	1 pc	5010-50162
GL-SPE Mini Vacuum Manifold Delivery Tip for 12C	15 pcs	5010-50163
GL-SPE Mini Vacuum Manifold Chamber for 96W	1 pc	5010-50165
GL-SPE Mini Vacuum Manifold Base Unit (Common)	1 pc	5010-50166
GL-SPE Mini Vacuum Manifold Drain Plate (Common)	1 pc	5010-50167
GL-SPE Mini Vacuum Manifold Shim Set 1 t x 2 pcs, 2 t x 1 pc for 96W	1 set	5010-50168
GL-SPE Mini Vacuum Manifold Gasket Set *2 (Common)	1 set	5010-50169

*1 : Top Plate doesn't include delivery tip.
*2 : Gasket set contains a gasket for top side and a gasket for bottom side.

Other Accessories

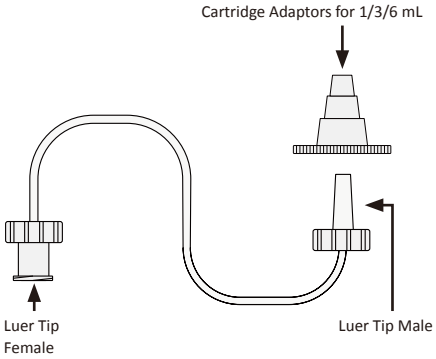
Eggplant-Shaped Flasks

A transparent sliding eggplant flask is used to collect the eluted liquid from the solid phase column. The sliding part is TS29/38.

Description	Volume	Qty.	Cat.No.
TS29/38	50 mL	2 pcs	5010-51031
	100 mL	2 pcs	5010-51032
	200 mL	2 pcs	5010-51033*

*: 200 mL eggplant flasks cannot be used with the inertosep aspiration manifold.

Connecter Tubings



A 30-cm tube with lure tip male on one side and lure tip female on the other. One InertSep cartridge adapter (for 1, 3, and 6 mL) is included per bottle.

Description	Specification	Qty.	Cat.No.
Connecter Tubings	PTFE Tubing 30 cm	1 pc	5010-52021
		5 pcs	5010-52022

Cap for SPE Columns

It can be used as an inlet/outlet plug for luer device–type solid phase columns or as an unused plug for luer connections.

Description	Specification	Qty.	Cat.No.
Male luer cap	PP	50 pcs	5010-52015
Female luer cap		50 pcs	5010-52016

Plastic Disposable Syringe

A low-blank disposable syringe made of highly inert polypropylene. It can be used for filtration treatment prior to analysis. In addition, the Luer-lock type connection makes it easy to connect to a syringe.

Description	Volume	Qty.(pcs)	Cat.No.
Plastic Disposable Syringe	2 mL	100	1030-55102
	5 mL	100	1030-55105
	10 mL	100	1030-55110
	20 mL	100	1030-55120

GL Filter

Impurity particle removal filter for HPLC.
PTFE (hydrophobic and hydrophilic), Nylon, and PES are available as filter materials.

Chemical resistance list

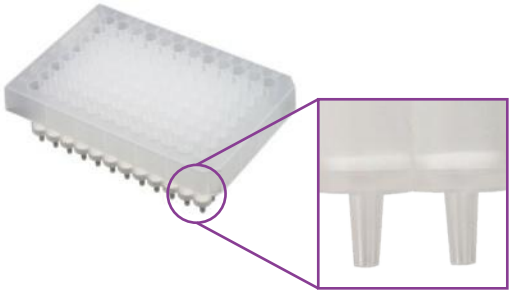
FastRemover Series



FastRemover Tip Shape

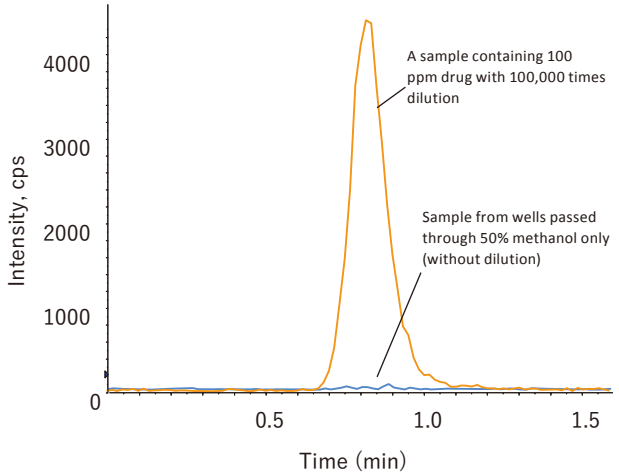
This 96-well filter plate uses a low adsorption filter and a housing with low elution of plasticizers and other substances. Serum and plasma samples can be processed easily and reliably.

- Can be used for high-sensitivity analysis due to a low blank to use pellets that have undergone a dissolution test.
- The tip has a long nozzle shape, which enables small-volume elution and prevents cross-contamination between wells.
- Can be used for processing with automated equipment due to its structure with excellent liquid permeability without clog error.

Filter Plate FastRemover MF

The UHPLC apparatus, which has been widely used in recent years, has a low pipe inner diameter to reduce dead volume, and it is said to have a high risk of system and column clogging because of particulate contamination. Therefore, it is recommended that the measurement sample also be passed through a 0.2-µm filter. However, conventional filter plates have a short nozzle, which causes the sample to splash, and there is concern about contamination of other wells. The FastRemover MF has a long nozzle that enters each well, allowing the sample to be filtered with minimal risk of contamination.

LC/MS Analysis Result of Post-Filtration Eluate



Filter Plate for Deproteinization FastRemover for Protein

The deproteinization method requires a significant amount of time and effort when processing multiple samples. In processing with FastRemover for Protein, the sample is easily recovered by the pass-through filtration of the protein-denatured sample using an organic solvent and aspiration. FastRemover for Protein uses polypropylene pellets, which have low plasticizer elution, and the membrane is molded from PTFE, which exhibits a low adsorption capacity, into a multilayer membrane. Thus, it can be used with any denaturing agent, from methanol to acetonitrile.

Filter Plate for Phospholipids/Pro

Biological samples, such as blood, contain phospholipids. In LC/mass spectrometry (MS) (/mass spectrometry (MS)) analysis, these phospholipids may suppress the ionization of the target substance.
FastRemover for phospholipids removes more than 90% of phospholipids for more accurate analysis.

Specification

Description	Specification
Pore Size	0.2 µm
Max. Throuhput Volume	1.0 mL
Recommended Solvent	0.1 to 1% Formic Acid-Acetonitrile Solution 1:4 or 1:3 (Biological sample:Solvent)
Max. Sample Capacity	150 µL (Serum)

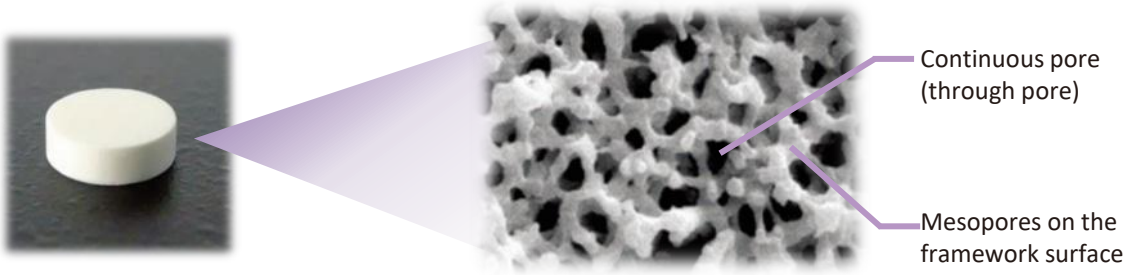
Monolith Silica

Monolith Silica ~ New separation media that are neither particulate nor membrane ~

Silica monoliths are integral silica gels with uniform continuous pores and produced from ethyl silicate. Unlike the particle media, the silica monolith is shaped like a disk. Silica monoliths have high liquid permeability and large surface area as they have through pores and mesopores on their framework surface. Thus, this state of the art medium is becoming popular worldwide for its properties: high recovery, high performance of adsorption, and desorption.



Silica monolith structure

Advantages of Monolithic SPE materials over particle packed SPE materials

- Disk-shaped silica monoliths do not use frits to hold particle media in traditional solid phase extraction cartridges.
- Monolithic material has a massive surface area, making it possible to reduce the sample volume. Silica monoliths makes it possible to retain samples in the cartridge and completely elute small samples during processing.
- Despite its high liquid permeability, it is also suitable for fast elution without losing its high recovery as it achieves rapid sample diffusion and separation.

Silica monolith

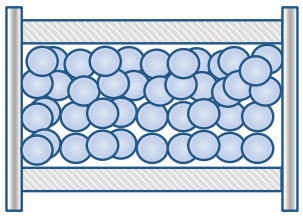
- No filter required
- Minimized separation media

Bed volume for separation media : small

Sample diffusion in the column : fast

Separation speed : fast

Particle-filled Form



- Need for filters

→ liquid may be remained in the filter

Bed volume for separation media : large

Sample diffusion in the column : slow

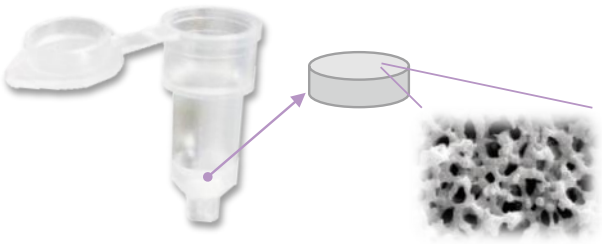
Separation speed : slow

MonoSpin series

MonoSpin is a solid-phase extraction spin column that uses silica monoliths with uniform continuum pores. It effectively and rapidly extracts, isolates, purifies, and concentrates samples by centrifugation.

【Features】

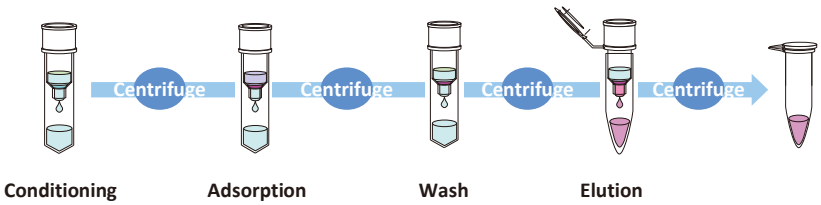
- Easy operation by centrifuge
- Speedy sample treatment with a superb through the pore
- Excellent reproducibility (S-type) even at 100 µL or fewer elution volumes.



Operation method

Short time centrifugation is used to pass the liquid in solid-phase extraction.

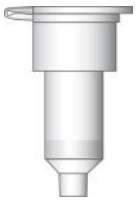
The whole sample treatment process can be done within 10 min.



Centrifuge Operation

Shape

MonoSpin series cartridges of different types are available:
Type S: Excellent for pretreating the sample for 50–800 uL
Type L: Appropriate for sample 0.5–8 mL.
For the details of the varied functional group, please see the next page.



S Type

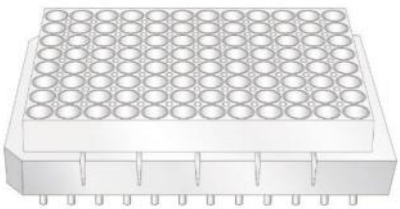
- Disk size：4.2 × 1.5 mm
- Sample volume：up to 800 µL
- Elution volume：50 to 800 µL
- Centrifugation speed：2,000 to 10,000 ×*g*

L Type

- Disk size：9 × 3 mm
- Sample volume：up to 8 mL
- Elution volume：0.5 to 8 mL
- Centrifugation speed：1,000 ×*g*

NOTE) MonoSpin ProA and MonoSpin ProG have different shapes. Please see page 88 for details.

96 Well plate type



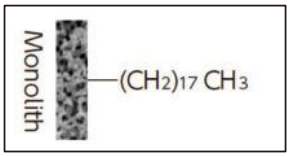
- Sample volume：up to 800 µL
- Elution volume：50 to 800 µL
- Centrifugation speed：1,000 to 5,000 ×g (can be used in vacuum aspiration)

NOTE) MonoSpin C18 FF, MonoSpin ProA and MonoSpin ProG have different specifications.
Please see page 82 and 83 for details.

MonoSpin series lineup

MonoSpin C18/C18 FF

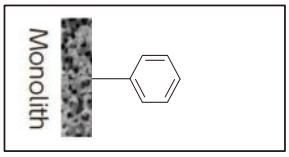
S L 96



Octadecyl functional group.
Optimal for drug extraction in biological samples and desalting and enrichment of peptide samples.
High-flow (FF) designs are also available.

MonoSpin Ph

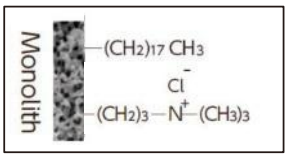
S



The phenyl group is chemically bonded, which makes it feasible to use weaker hydrophobicity than C18. Therefore, it is suitable for the recovery of hydrophobic drugs from biological samples under reversed phase mode.

MonoSpin C18-AX

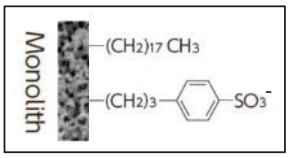
S 96



It is a mix mode type in which both octadecyl and quaternary ammonium groups are chemically bonded. It can reliably retain bio-samples at high salt concentrations and is particularly suitable for the recovery of acidic drugs.

MonoSpin C18-CX

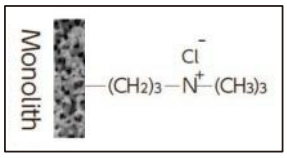
S 96



Its octadecyl and benzenesulfonic acid groups are bonded. Thus, purifying dissociated basic drugs in serum and urine is appropriate. Compared with MonoSpin C18 and SCX alone, SCX has higher cleanup efficacy as it works as hydrophobic and ion-exchange interactions.

MonoSpin SAX

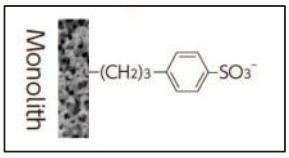
S L 96



Bond with Trimethyl aminopropyl, combining strong anion exchange and weak hydrophobic interaction. It is best for extracting acidic drugs.

MonoSpin SCX

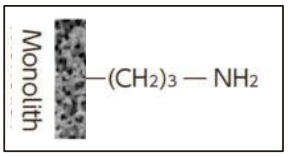
S L 96



It is bonded with propyl benzene sulfonic acid, combining strong cation exchange and hydrophobic interaction. Therefore, MonoSpin SCX is excellent for extracting basic drugs.

MonoSpin NH2

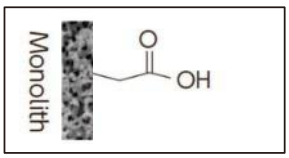
S L 96



It is bonded with aminopropyl and is beneficial for enriching the sugar chain or hydrophilic compounds by HILIC mode.

MonoSpin CBA

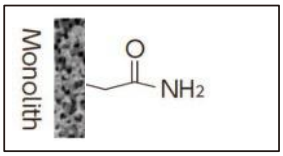
S L 96



It is bonded with propyl benzene sulfonic acid, combining strong cation exchange and hydrophobic interaction. It is excellent for extracting basic drugs.

MonoSpin Amide

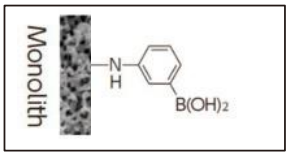
S 96



It is bonded with an amide group. MonoSpin amide is best for extracting sugar chains and various acidic and basic hydrophilic compounds by HILIC mode.

MonoSpin PBA

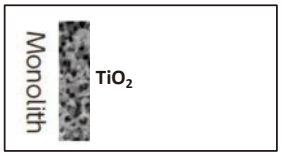
S 96



It is bonded with phenyl boric acid, which gives you higher selectivity. Hence, MonoSpin PBA is excellent for extracting cis diol compounds, such as catechol amines.

MonoSpin TiO

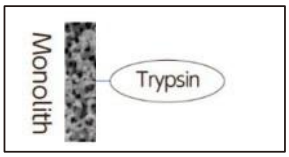
S



It is characterized by a monolith skeleton coated with dioxide titanium. It is excellent for enriching phosphopeptides.

MonoSpin Trypsin

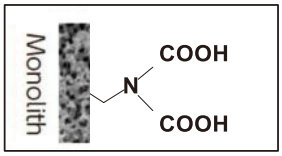
S



The columns are immobilized with trypsin, a digestive protein enzyme.
It enables the rapid digestion of proteins.

MonoSpin ME

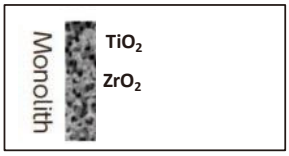
S L



It is bonded with iminodiacetic acid groups. Therefore, it is optimal for the recovery of trace metals in samples.

MonoSpin Phospholipid

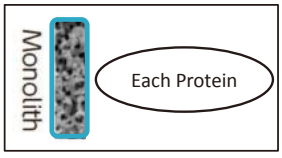
S L



It has a phospholipid removal column coated with titanium dioxide and zirconium dioxide on a silica monolith. It adsorbed phospholipids in samples with an easy pretreatment.

MonoSpin ProA, ProG, ProL

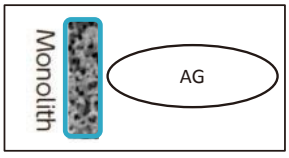
S L 96



They are affinity carriers on which each protein is immobilized. Antibodies can be purified quickly.
MonoSpin ProL is S type only. The shape of the L-shaped column is a syringe barrel type.

MonoSpin AG

S L 96



It is a column that combines octadecyl groups and cation exchange groups. Hydrophobic interaction and ion exchange action work.

S : S-type column products L : L-type column products 96 : 96-well plate-type product

MonoTip C18

MonoTip C18

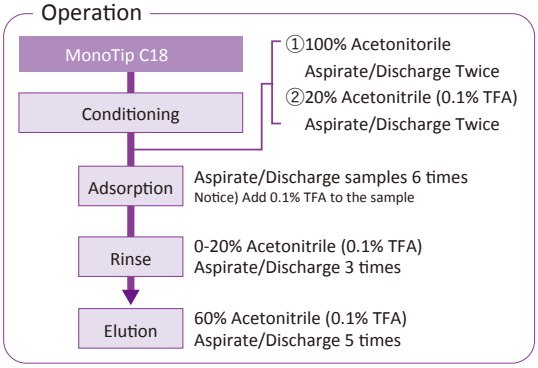
MonoTip C18

MonoTip C18 is a pretreatment tip consisting of octadecyl groups bonded to silica monoliths with uniform continuous pores. Simple pipetting allows for the desalting and concentration of proteins and peptides in reversed-phase mode.

High purification efficiency, large loadings, good reproducibility.

With conventional tips that use particle fillers, it is difficult to keep the particle space constant, resulting in poor reproducibility and low recovery rates. However, by exploiting the monolith with uniform continuous pores, a high purification efficiency, large sample loadings, and good reproducibility can be achieved.

Operation

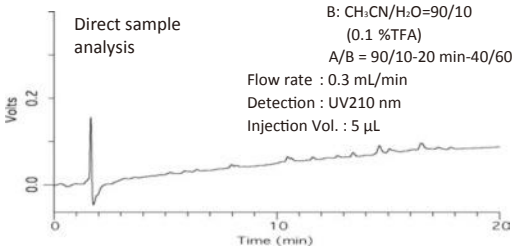


Effective sample concentration

Sample: β-casein trypsin digestible(0.1 mg/mL)

Condition
Column : Inertsil WP300 C18 (150 X 2.1 mm I.D.)
Eluent : A: H_2O (0.1 %TFA)
B: CH_3CN/H_2O=90/10 (0.1 %TFA)
A/B = 90/10-20 min-40/60
Flow rate : 0.3 mL/min
Detection : UV210 nm
Injection Vol. : 5 µL

Direct sample analysis



Preparation with MonoTip C18

Elution of samples under 5x concentration conditions.
(100 µL of a sample treated with 20 µL of the eluent)

EVSecond

Exosome Purification Columns

Recent studies have reported significant roles of extracellular vesicle “Exosome” in development and progression of various diseases including cancer metastasis. Therefore, exosomes are considered as important targets for biomarkers and drugs. However, it remains difficult to isolate high-purity exosomes from biological fluids such as serum. EVSecond is a size exclusion chromatography open column optimized for effective purification of exosomes. Highly-purified exosomes can be easily collected from serum, plasma, or cell culture supernatant.

Features

- Simple gravity-flow handling without ultracentrifugation.
- EVSecond-purified exosomes possess efficient purity for comprehensive miRNA, proteome, and metabolome analysis.
- Exosomes are gently eluted in PBS without structural damage, allowing re-administration experiments of collected exosomes to cells or animals.

Advantages Over Traditional Procedures

- Much higher-purity exosomes can be obtained compared to ultracentrifugation or polymer precipitation methods.
- Unlike immuno-affinity purification using anti-tetraspanin antibodies, whole exosomes can be collected regardless of surface antigen profiles.

Typical Protocol using EVSecond

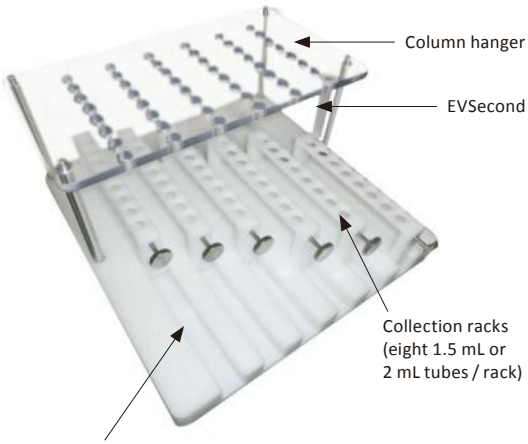
Gravity-flow is applied to each step.

1. Set columns on GL-SPE EXO fraction rack after mixing beads gently and thoroughly.
2. Block beads with 0.22 µm filter-purified FBS.
3. Equilibrate columns with PBS.
4. Load 50-700 µL 0.22 µm filter-purified samples (serum, plasma, or cell culture supernatant).
5. Load PBS and collect appropriate fractions including exosomes.

* Exosome-containing fractions can be identified by western blotting or ELISA experiments detecting tetraspanins (CD9, CD63, CD81, etc.)

GL-SPE EXO Fraction Rack

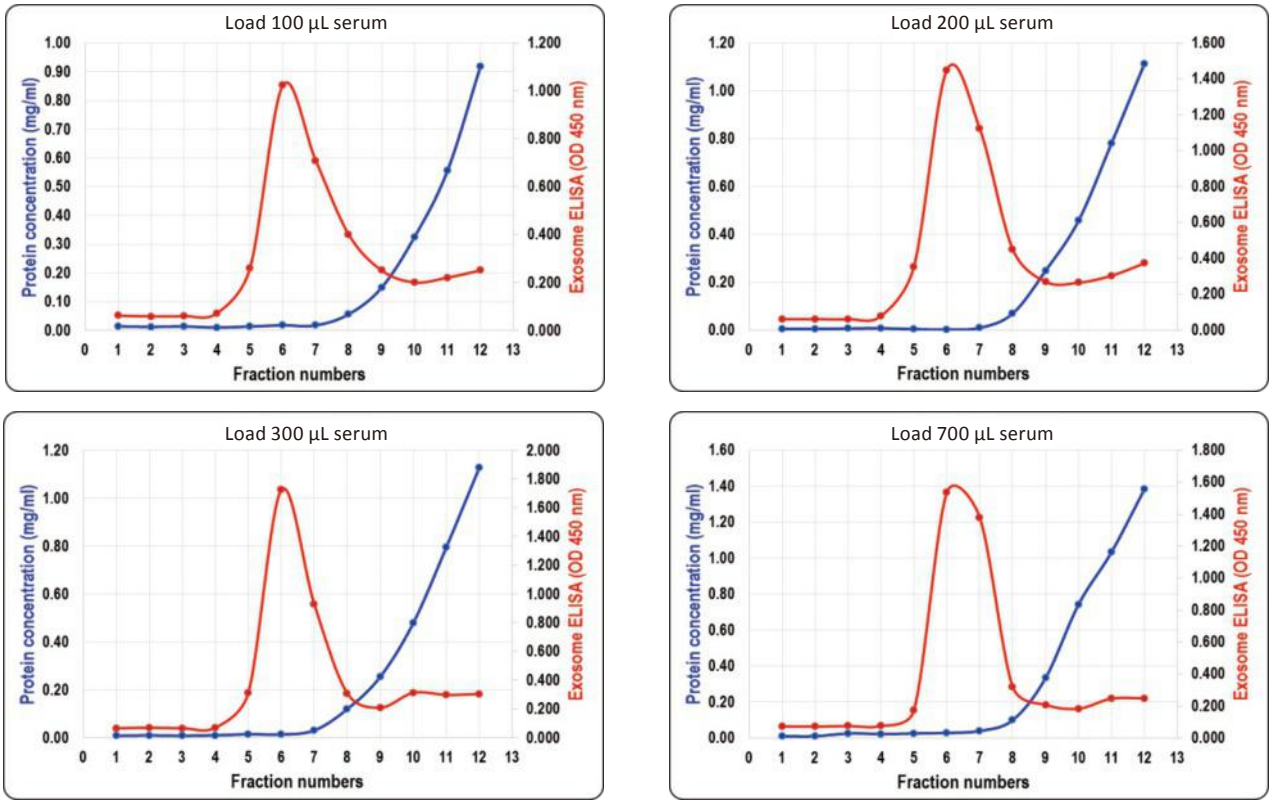
Open column rack optimized for EVSecond.
It helps smooth column handling and fractionation.



Dimensions : 300 (W) x 300 (D) x 150 (H) mm

Purification of Exosomes from Human Serum

A large amount of free proteins, metabolites, and nucleotides are involved in serum samples. Insufficient purification of exosomes often causes co-detection of non-exosomal components, leading to incorrect quantification results in omics studies. Exosomes were isolated from 100, 200, 300, or 700 µL of human serum using EVSecond method. Exosomes were clearly separated from serum free proteins such as albumin or immunoglobulins.



(100 µL / fraction)
Red line : CD9-CD9 exosome sandwich ELISA (detecting exosomes)
Blue line : Bradford assay (detecting serum free proteins)
Data provided by Dr. Koji Ueda from Graduate School of Frontier Sciences, The University of Tokyo

MonoSpin ProA, MonoSpin ProG, MonoSpin ProL

MonoSpin ProA, MonoSpin ProG and MonoSpin ProL are already immobilized onto a silica monolith offering rapid purification of antibodies. Additionally, a 96-well plate format is available to purify a multi-analyte. Each reagent for the purification of samples is attached.

【Shapes】

Spin Column Type

• Purification with compact tabletop centrifuge just in two minutes (e.g., 2,300 × g)
• Appropriate for purification of small volume sample (approximately 0.4 mg)
Maximum sample volume : 500 µL
Elution volume : 50 µLSample
loading capacity : ProA 400 µg, ProG 300 µg, ProL 200 µg

96 Well plate Type

• Purification by both aspiration or centrifuge
• Available for a multi-analyte with the same spin column volume.
Maximum sample volume : 500 µL
Elution volume : 50 µLSample
loading capacity : ProA 400 µg, ProG 300 µg

Large Spin Column

• Maximum 16 mg antibody can be recovered by centrifuge.
Maximum sample volume : 8 mL
Elution volume : 2 mLSample
loading capacity : ProA 16 mg, ProG 12 mg

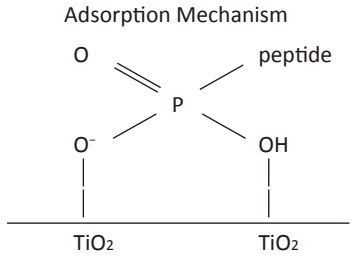
Phosphorylated Protein Research

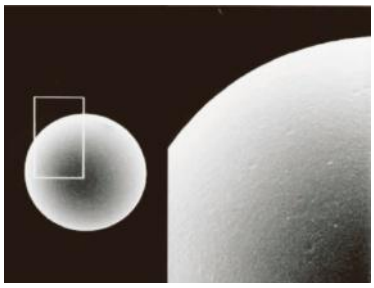
The study of reversible phosphorylation plays an important role in elucidating many cellular phenomena, including cell cycle, cell growth, apoptosis, and differentiation. However, when analyzing phosphopeptides in proteins, there are cases in which phosphopeptides are difficult to detect by MS because of their small amounts and low ionization efficiency. To solve this problem, GL Sciences offers the Titansphere series, which is optimized for the purification and concentration of phosphopeptides using titanium dioxide (titania) to specifically adsorb phosphopeptides.



Principle

- It is believed that phosphate groups and titanium dioxide adsorb under acidic conditions.
- Various studies have shown that titania and phosphopeptides bind selectively to each other. Evaluating the performance of titania optimized for the purification and concentration of phosphopeptides and the stability achieved only by in-house synthesis.

Titansphere TiO Bulk Materials (Titania Dioxide)



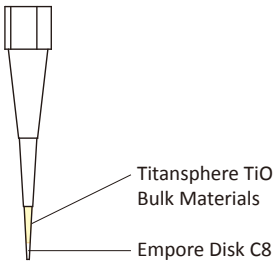
Titania Bulk Material

Titansphere TiO is a high-performance bead made of titania (titanium dioxide: TiO2) synthesized into uniform porous spherical particles that can selectively concentrate and purify phosphopeptides.

Specification

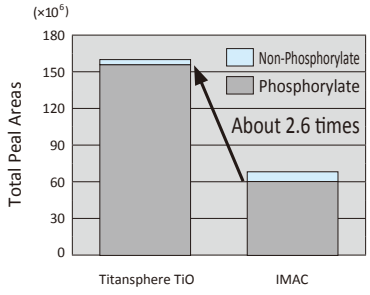
Description	Specification
Particle Size	5 µm、10 µm
Particle Shape	Spherical
Adsorption Spot	Titanium Dioxide Crystal
Pore Size	100 Å
pH Range	2 ～ 12
Gravity	1.74

Note: This filler was developed with the cooperation of Dr. Hiroshi Nakamura, who was affiliated with the Faculty of Pharmaceutical Sciences, Tokyo University of Science at the time of product development.



How to make a Titania Column

(1) Put an Empore Disk C8 cut to an appropriate size in the tip of the tip for 200 µL and use it as a filter.
(2) Titansphere TiO filler is stirred with CH_3CN/H_2O = 80/20 (v/v) and loaded into the tip. (Fill volume should be changed according to the purpose).
(3) Pressurize with air from the top of the tip using a syringe.



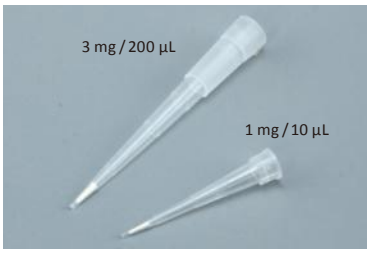
Comparison of Phosphorylated Peptide Recovery Amount

Compare Titansphere TiO with IMAC

Arabidopsis cell extracts were used to conduct a comparison study with commercial IMAC. Compared with IMAC, a high amount of phosphorylated peptides was detected, with a 2.6-fold increase in the total peak area of phosphorylated peptides and a 1.8-fold increase in the peptide identification constant.

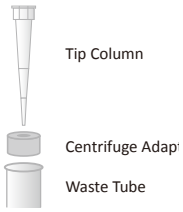
Description	Specification	Volume	Cat.No.
Titansphere TiO	5 µm	500 mg	5020-75000
	10 µm	500 mg	5020-75010

Titansphere Phos-TiO Kit



Tip Column

How to use



This kit includes a chip column, dedicated buffer, and protocols. The chip columns are optimized for the Phos-TiO Kit to enhance the adsorption capacity and the efficient purification and concentration of phosphopeptides. The Phos-TiO MP kit is also suitable for the purification and enrichment of multiple phosphorylated peptides.

Specification

Sorbent Mass/Tip Volume	1 mg/10 µL	3 mg/200 µL
Sample Loading Capacity	1.2 µg	3.5 µg

Sample: Tyr(PO_3H_2)-Angiotensin II

Features

- High selectivity
  Due to its high affinity toward peptides containing phosphate groups, phosphopeptides can be detected by MS even in unstimulated cell extracts containing small amounts of phosphopeptides.
- Easy operation
  The operation process consists of only five steps. It can be purified and concentrated in a short time, with an operation time of approximately 40 min. In addition, each step is performed entirely by centrifugation. Therefore, human error is minimized, and the system can be easily operated by anyone.
- Small–large numbers of samples can be handled.
  Since the chip column is a stand-alone unit, experiments can be performed from one sample to many samples at once using a dedicated centrifugal adapter (sold separately).

Description	Sorbent Mass/Tip Volume	Qty.	Cat.No.
Titansphere Phos-TiO Kit	1 mg/10 µL	24 Times	5010-21300
	3 mg/200 µL	24 Times	5010-21305
	3 mg/200 µL	96 Times	5010-21306
TitanspherePhos-TiO MP kit	1 mg/200 µL	24 Times	5010-21280
	3 mg/200 µL	24 Times	5010-21281

Note: A centrifugal adapter is required for operation. Please purchase separately.

Centrifuge Adapter

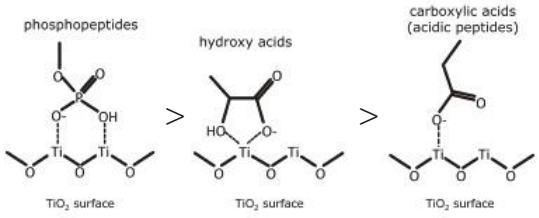
For 200 µL Tip
96WP Centrifuge Adapter

Titansphere Phos-TiO

A syringe–barrel type cartridge column is used for the selective collection and concentration of phosphorylated peptides with a larger loading capacity than that of the tip type.
From conditioning to elution, the process can be performed in a centrifuge. This reduces human error and makes it easy for anyone to operate.

Sorbent Mass/Tip Volume	50 mg/3 mL	100 mg/3 mL
Particle Size	10 µm	
Sample Loading Capacity	60 µg	120 µg

Note: The loading volume is a guide when Tyr (PO_3H_2)-Angiotensin II is used. The maximum sample load varies depending on the state of the matrix.



Principle

Titanium dioxide is thought to adsorb with high affinity for phosphate groups. However, our recommended purification method using a lactic acid solution (hydroxy acid) prevents the adsorption of non-phosphorylated peptides because the lactic acid binds to the remaining active sites and inhibits the binding of the carboxyl groups.

How to Operate

From conditioning to elution, various solutions and samples are passed through a centrifuge.
(Conditioning and elution solutions are listed as examples).

Note: Due to the small particle size, purification and concentration cannot be performed using a suction manifold.

Cartridge

Conditioning
Add Buffer A: 80 % Acetonitrile (0.5 % TFA), then centrifuge
Add Buffer B: 300 mg/mL of Lactic acid in Buffer A, then centrifuge

Adsorption

Rinse

Elution
Add 5 % ammonium aqueous solution, then centrifuge.
Add 5 % pyrrolidine aqueous solution, then centrifuge

Concentrated and Purified Phosphopeptides

Desalting
MonoSpin C18 is recommended for desalting. (Page 128)
For more information on desalination, please contact us separately.

Centrifuge

MonoTip TiO

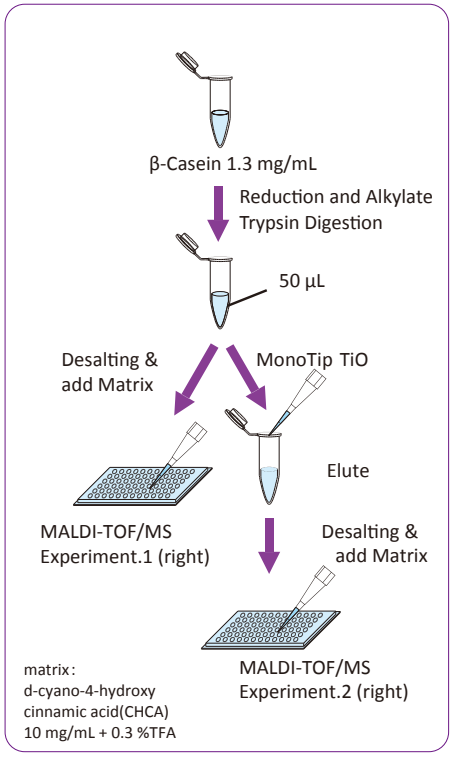
MonoTip TiO is a pretreatment tip consisting of a matrix silica gel coated with titanium dioxide that selectively collects phosphopeptides.
Using MonoTip TiO to collect only phosphorylated peptides, the detection sensitivity can be improved, and the time required for analysis can be reduced

● Features

- Peptides can be easily purified by pipetting. Unlike the case in the IMAC method, no metal coordination bonding process is required here, and there is no metal dropout.
- Sample volume: 50–200 µL. Each chip can hold ~5 µg of phosphopeptide and can be concentrated by reducing the eluate.

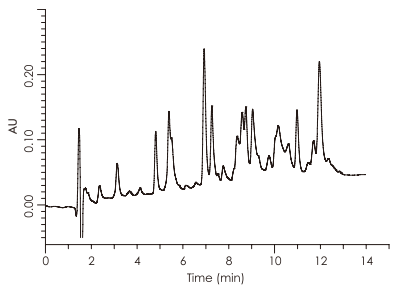
Apprication

Sample : β-Casein
1 phosphopeptide : FQpSEEQQQTEDELQDK(MW=2061)
4 phosphopeptides: RFLEELNVPGEIVEpSLpSpSpSpSEESLTR(MW=3122)



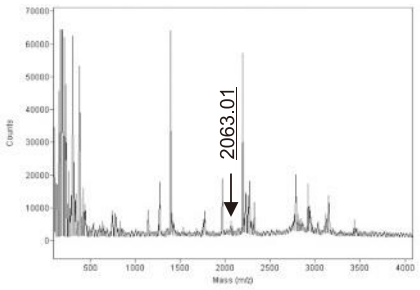
Experiment 1: Sample before purification (phosphorylated peptides are barely detectable)

HPLC



Many types of digestates are observed

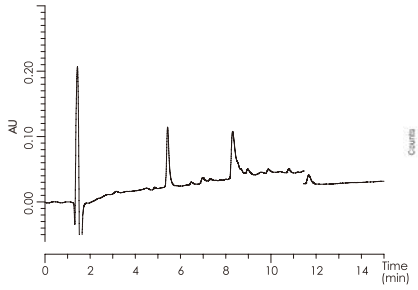
MALDI-TOF/MS (Voyager RP)



Detects only monophosphorylated peptides

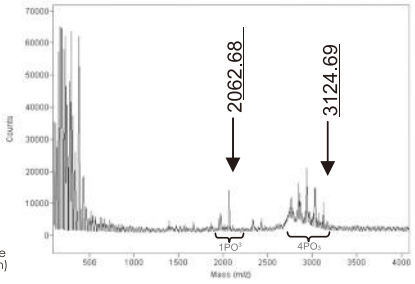
Experiment 2: Post-purification sample (can be selectively extracted from many peptides)

HPLC



Only two types of digests are observed.
Purification effect by MonoTip will be confirmed.

MALDI-TOF/MS (Voyager RP)



Phosphorylated peptides and tetraphosphorylated peptides in significant amounts are detected.

Specification

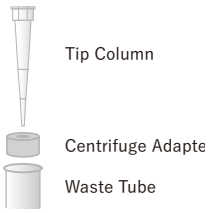
Description	Specification
Operation time	Approx. 6 mins
Suitable sample volume	20 ～ 200 µL
Sample loading volume	～ 5 µg
Tip volume	200 µL

Description	Specification
Packing material	Silica Monolith (Highly pure silica gel)
Through-pore Diameter	10 ～ 20 µm
Meso-pore Diameter	20 nm
Surface area	200 m^2/g
Functional group	Dioxide titan coating

Description	Volume	Qty.	Cat.No.
MonoTip TiO	200 µL	24 pcs	5010-21007
		96 pcs	5010-21005

GL-Tip Series

How to operate



Prepare a centrifuge capable of operating at 3000 x g.

Peptide Desalting and Enrichment Tip

GL-Tip SDB is a 200-µL tip filled with SDB (styrene divinylbenzene) polymer. Trapping with SDB chips, which have even stronger retention than C18 (silica matrix), reduces the peptide loss and enables efficient desalting.
The GL-Tip GC packed with GC can trap highly hydrophilic peptides and can be used in conjunction with the GL-Tip SDB to improve peptide identification.

Spin Tips for Peptide Fractionation GL-Tip SCX / GL-Tip SDB-SCX

GL-Tip SCX is a chip filled with SCX (cation-exchange resin), and GL-Tip SDB-SCX is a chip combining the SDB (styrene divinyl benzene) polymer and SCX.
The GL-Tip SDB-SCX can perform desalting in the first stage of SDB, allowing the direct handling of salt-containing samples.

Comparison of salinity gradient and TFA gradient methods

Conventionally, peptide fractionation is performed by elution using a salt-concentration gradient; however, the same peptides are often mixed in the fractions before and after, resulting in inefficiency due to the identification of the same peptides. However, the use of a more efficient TFA gradient method (patent pending), which is an improvement over the salinity gradient method, is expected to improve the peptide identification constant and efficiency. The GL-Tip SCX is a chip optimized for the TFA gradient method.

Its fractionation efficiency was tested using phosphorylated peptides derived from human colon cancer DLD-1 established cells. The TFA gradient method identified 14,307 peptides with the same constant, indicating high efficiency. In addition, few overlapping peptides were observed in the eluate, allowing for efficient identification.
